

POSITIONING

Language learning that builds *confidence*, not dependence — with the teacher kept in the loop.

THE PROBLEM

Bartar's classes already run on apps, AI translators and writing tools. The problem isn't access to technology — it's that these tools can confuse learners, encourage passive copying, and give inconsistent feedback. Bartar is designed so technology supports real learning instead of quietly replacing it.

WHO IT'S FOR

- Students**
Mixed ages and levels who learn best with guidance, encouragement, and tools matched to their pace.
- Teachers**
Who need to see how students are really doing — and keep feedback in their own hands.

PRINCIPLES

- Understanding over access**
Tools help learners think, never hand over instant answers.
- Teacher in the loop**
AI drafts; the teacher approves. Feedback stays human.
- Confidence is a metric**
Daily check-ins make confidence visible, not just scores.
- Accessible by default**
Text size, contrast, spacing and audio change the whole app.

WHAT IT DOES

- Learn**
Guided lessons and **multimodal cards** that teach one word four ways — see it, hear it, say it, write it.
- Practise**
Air-writing to trace letters by hand, a **spelling lab** that reads words aloud, and **pronunciation** practice before recording.
- Understand**
Smart Translate with try-first mode, **reading support** that simplifies and reads aloud, and a **text transformer** that matches any text to the learner's level.
- Stay supported**
Daily **confidence check-ins**, **teacher-reviewed feedback** (AI drafts, teacher approves), and full **accessibility controls** the learner owns.

WHY NOW

Language learning is one of the fastest-growing corners of education technology. Learners now expect mobile, AI-assisted tools — and the ones that last will be those that keep people learning, not just the ones that answer fastest.
